

## Michigan PROCEDURES 12-LEAD ECG

Initial Date: 5/31/2012

Revised Date: 01/05/2023

Section: 7-1

### 12-Lead ECG

**₩** 

Paramedic Protocol (may be Specialist or EMS per MCA selection)

Aliases: EKG, 12 lead

### Indications:

- 1. A 12-lead ECG is indicated on patients exhibiting any of the following signs/symptoms:
  - A. Chest pain or pressure
  - B. Upper abdominal pain
  - C. Syncope
  - D. Shortness of breath
  - E. Pain/discomfort which are often associated with cardiac ischemia:
    - a. Jaw, neck, shoulder, left arm or other presentations; unless no other symptoms exist and the cause of the specific pain can be identified with a traumatic or musculoskeletal injury.
    - b. If there is any doubt about the origin of the pain/discomfort, or the presentation seems atypical for the mechanism, a 12-lead should be performed.
  - 2. Patients exhibiting the following signs/symptoms should have a 12-lead ECG performed if the etiology of the illness is indicative of an Acute Coronary Syndrome or the etiology of the illness is indeterminate:
    - A. Nausea
    - B. Vomiting
    - C. Diaphoresis
    - D. Dizziness
    - E. Patient expression of "feelings of doom"
  - 3. A 12-lead ECG may be performed based on the clinical judgment of the paramedic even in the absence of the above signs/symptoms.

#### Procedure:

- 1. Follow General Pre-hospital Care-Treatment Protocol.
- 2. Perform 12-lead ECG per manufacturer guidelines, if available.

MCA approval to obtain ECG
☐ Specialist
□ EMT
MCA approval to transmit ECG (and notify of STEMI)
□ Specialist
□ EMT
MCAs will be responsible for maintaining a roster of the BLS and LALS agencies choosing to participate and will submit roster to MDHHS

MCA Name:

MCA Board Approval Date: MCA Implementation Date: MDHHS Approval: 1/5/23

evised Date: 01/05/2023 Section: 7-1

- 3. Report if acute MI is suspected, either by device or paramedic provider interpretation and promptly relay either the 12-lead findings via MCA approved communications system or transmit 12-lead to the receiving facility.
- 4. Agencies in cooperation with hospitals with pre-hospital 12-lead ECG receiving capability should have the relay done electronically as soon as possible for the following conditions:
  - A. ST elevation ≥1mm in 2 contiguous leads.
  - B. Chest pain patient with left bundle branch block.
  - C. EMS personnel request assistance by hospital for interpretation of ECG.
  - D. Hospital requests ECG be sent.
- 5. The Acute MI Report relayed to the receiving facility should include the following:
  - A. \*\*\* Acute MI Suspected \*\*\* or equivalent machine indication of Acute MI.
  - B. Location of MI, "ST elevation, consider injury"
  - C. Time of onset of the chest pain if present.
  - D. Current level of pain.
  - E. Cardiac history (previous MI, CHF, CABG, Angioplasty or Stent).
  - F. Presence of possible indicators of false positive ECG (tachyarrhythmia, left bundle branch block, pacemaker, wide complex QRS, positive ECG with artifact after previous negative ECG).
- 6. Transport patients per MCA transport protocol.
- 7. Repeat 12 Lead is indicated for prolonged transports or changes in condition.
